

# Building profile-likelihood parameter grids

Leonardo Souto Ferreira

2026-08-28

## Note

Code execution is disabled for this document (`execute: enabled: false`): it reads `results/aggregated/combined_results_<RUN_ID>_refined_second.csv`, the aggregated output of one specific past fitting run, which isn't part of this repository and only exists on the machine/cluster that produced it. Render it on its own (`quarto render vignettes/create_profile_grids.qmd --execute`) once you have a matching results file and have updated the hard-coded `RUN_ID` below.
